SEC will be forced to give crypto guidance despite bureaucracy, risk avoidance: Peirce

More investors HODL bitcoin in anticipation of a 2021 BTC bull market

Crypto long and short: a UK ban on crypto derivatives will hurt, not protect investors

### IN THE KNOW... This week we will look at UNI.

Uniswap is currently Ethereum’s most popular decentralized exchange (DEX.) Users can trade crypto, stake their tokens in liquidity pools, and vote on governance decisions. The UNI token is used for Uniswap’s governance model. It went live in September 2020 and quickly moved into the top 50 coins list. It is currently number 35 according to CoinGecko.

Pros: decentralized, open governance, liquidity pools allow investors to earn on their holdings.

Cons: not useful for investors wanting to trade non-Ethereum tokens or spend fiat, been impacted by high ETH gas prices lately. Note: this is strictly for informational purposes & is in no way an endorsement of the coin.

To learn more about UNI, you can visit <https://uniswap.org/blog/uni/>
